ReadMe_User

1. install python

    ------- create a hello.py file // to check whether python is running on your system or not

    -------after getting output from your hello.py

2. install flask, torch, torchvision, nltk, flask-cors

    command:

1. pip install flask torch torchvision nltk flask-cors

2. After installation type 'python'

    import nltk

    nltk.download('punkt')

    Now:

    run python train.py

    --- this will train your bot

    run python chat.py

    -- this will allow you to chat with your bot named 'chatbot' on terminal

    If you want to run chatbot on browser:

    TYPE in terminal

    python app.py

    --then go to base.html file run it on browser

    you'll be able to chat with chatbot
